CHOWSUNKET AND ENDAKO WATER CLUSTER VALVE REPLACEMENT

At 7:00 a.m. this morning, Public Works crews successfully isolated the water system in accordance with the notice issued on September 24, 2026. The valve replacement plan functioned as intended, and the water valves effectively limited the service interruption to the area highlighted in yellow.

Work will continue throughout the day, with water service to the affected area scheduled to be restored on or before 7:00 p.m. today.

Once work is completed on October 2, 2026, the intersection of Endako Avenue and Chowsunket Street will remain closed to traffic. The intersection is scheduled to be repaved during the week of October 5, 2026, and motorists are asked to continue using alternate routes until the work is complete.
